Generative AI - Inspiration

Figure: VAE: Aspuru-Guzik et. al.

- Learns a continuous vector representation;
- Can the latent space be interpretable? How to enhance valid-decoding rate?

Generative AI - Project Results

First 2–3 months:[1]

Literature Review deep learning models → selected VAE (Fig. 1),

Implementation simplified model (Keras 3),

Deployment quantised ONNX model in browser,

Reproducibility document, test, notebooks.

[1] Work carried out at the University of Glasgow.

Generative AI - Project Results

First 2–3 months:[1]

Literature Review deep learning models → selected VAE (Fig. 1),

Implementation simplified model (Keras 3),

Deployment quantised ONNX model in browser,

Reproducibility document, test, notebooks.

Planned:

Optimise UV HOMO-LUMO gap,

Select candidates for robotic synthesis.

[1] Work carried out at the University of Glasgow.

Object Detection - Overview

Figure: Project's Development Stages

YOLOX: https://github.com/Megvii-BaseDetection/YOLOX

Object Detection - Results

- Pseudonymisation of IDs at Zakodium (Demo site)
- Frameworks: Tensorflow.js, Pytorch

Object Detection - Results

- Pseudonymisation of IDs at Zakodium (Demo site)
- Frameworks: Tensorflow.js, Pytorch

(a) Face and signature detection

Object Detection - Results

- Pseudonymisation of IDs at Zakodium (Demo site)
- Frameworks: Tensorflow.js, Pytorch

(a) Face and signature detection

(b) Face, barcode, MRZ detection

Binary Data Manipulation - iobuffer

`iobuffer` is a helper to write binary parsers.

```
import { IOBuffer } from 'iobuffer';

const io = new IOBuffer() // offset 0
io.writeChars('Hello world') // offset now 11
  .back(2) // Back to 9
  .skip(1) // Forward to 10
  .rewind() // back to 0
  .readArray(11, "uint8") // read 11 bytes at once
```

Contributions: text decoder, readArrays of typed-data, host-endianness detection.

Other Projects

Github Project	npm ↓	Description
iobuffer	downloads 19M/month	Binary data manipulation library
regression-simple-linear	downloads 589k/month	Simple linear regression
regression-polynomial	downloads 511k/month	Polynomial regression
fcnnls	downloads 3.2k/month	Fast combinatorial non-negative least squares
spc-parser	downloads 1.3k/month	GRAMS .spc parser
wdf-parser	downloads 804/month	WDF Raman file parser
IDs Project	–	Pseudonymisation of IDs.

Table: Github hosted projects, excepting last (IDs) project.

Thanks!
