- Mathematical optimisation.

Generative AI

Outline and results:[1]

Completed (first 2–3 months):

- **Survey** deep learning models → selected VAE (Fig. 1a),
- **Implement** simplified model (Keras 3),
- **Deploy** quantise model ONNX model in browser,
- **Package** document, test, notebooks.

[1] Done at the University of Glasgow.

Generative AI

Outline and results:[1]

Completed (first 2–3 months):

- **Survey** deep learning models → selected VAE (Fig. 1a),
- **Implement** simplified model (Keras 3),
- **Deploy** quantise model ONNX model in browser,
- **Package** document, test, notebooks.

Planned:

- **Optimise** UV HOMO-LUMO gap,
- **Select** candidate for robotic synthesis.

[1] Done at the University of Glasgow.

YOLOX: https://github.com/Megvii-BaseDetection/YOLOX

Object Detection

Pseudonymisation of Identity Documents at Zakodium.[2]

Frameworks: Tensorflow.js , Pytorch .

[2] Demo: https://mrz.zakodium.com/

Object Detection

Pseudonymisation of Identity Documents at Zakodium.[2]

Frameworks: Tensorflow.js , Pytorch .

(a) Face and signature detection

[2] Demo: https://mrz.zakodium.com/

Object Detection

Pseudonymisation of Identity Documents at Zakodium.[2]

Frameworks: Tensorflow.js, Pytorch.

(a) Face and signature detection

(b) Face, barcode, MRZ detection

[2] Demo: https://mrz.zakodium.com/

Object Detection

Pseudonymisation of Identity Documents at Zakodium.[2]

Frameworks: Tensorflow.js, Pytorch.

Binary Data Manipulation - iobuffer

`iobuffer` is a helper to write binary parsers.

```
import { IOBuffer } from 'iobuffer';

const io = new IOBuffer() // offset 0
io.writeChars('Hello world') // offset now 11
  .back(2) // Back to 9
  .skip(1) // Forward to 10
  .rewind() // back to 0
  .readArray(11, "uint8") // read 11 bytes at once
```

Contributions: text decoder, readArrays of typed-data, host-endianness detection.

Other Projects

Base URL for projects: https://github.com/santi-mir/⟨project⟩.

Github Project	npm ↓	Description
`iobuffer`	downloads 19M/month	Binary data manipulation library
`regression-simple-linear`	downloads 589k/month	Simple linear regression
`regression-polynomial`	downloads 511k/month	Polynomial regression
`fcnnls`	downloads 3.2k/month	Fast combinatorial non-negative least squares
`spc-parser`	downloads 1.3k/month	GRAMS `.spc` parser
`wdf-parser`	downloads 804/month	WDF Raman file parser

Most are also published in Zenodo.
